

AT1 & AT4

USER MANUAL

◆ OVERVIEW ◆

The Kuassa **EVE-AT I / EVE-AT4** consists of two individual EQs inspired by the design of the legendary Neve* *1081* and *1084* that are known for their clear, smooth, and very musical characteristics. We are thrilled by the sound and present these EQs as a modern tribute to one of the most influential audio tools ever created.

EVE-AT I is a 4-band parametric equalizer with an additional high-pass and low-pass filter. Inspired by the EQ section of a renowned British Classic –the Neve* *1081* –this equalizer delivers a clear, smooth, and musical sound to shape your tracks. The EVE-AT I possess an additional parametric band with expanded Q bandwidth selection in the low-mid and high-mid frequency ranges as compared to the EVE-AT4. In addition, the AT I implements a different high-pass and low-pass filter, giving the AT I a slightly more conventional frequency response in these areas. These characteristics mean the EVE-AT I is suitable for a broad range of musical applications, offering flexibility, versatility and all-round utility.

EVE-AT4 is a 3-band equalizer with an additional high-pass and low-pass filter. Designed as a tribute to the EQ section of the Neve* *1084*, which was created as the successor to the legendary Neve* *1073*. Although the EVE-AT4 possesses fewer bands, a smaller frequency selection palette, and less Q bandwidth selection options as compared to the EVE-AT I, its strength lies in its unique filter implementation, producing an idiosyncratic frequency response not present on the EVE-AT I. The result is a particular tonal character; the sound and tonal shape of its original incarnation is a hallmark of many classic recordings from the 70s.

Both the AT I and AT4 were designed with simplicity and clarity in mind, allowing for straightforward usage and immediate productivity. Although they share certain tonal characteristics, the EVE-AT I and EVE-AT4 reveal their differences in the details. The EVE-AT4 is the stronger ‘character’ equalizer, while the EVE-AT I is suitable as a ‘go-to’ equalizer for a wide range of instruments and musical applications.

1. Presets for EVE AT1/AT4 are located in the following folders*:

- **Mac:** *Users/[YourName]/Music/Audio Music Apps/Kuassa/Presets/EVE-AT1/EVE-AT4*
- **Win:** *~\Documents\Kuassa\Presets\EVE-AT1\EVE-AT4*

All presets inside these folders will be recognized by the plugin as individual presets, and sub-folders will be recognized as banks. They will thus be shown on the EVE-AT1/AT4's preset selector.

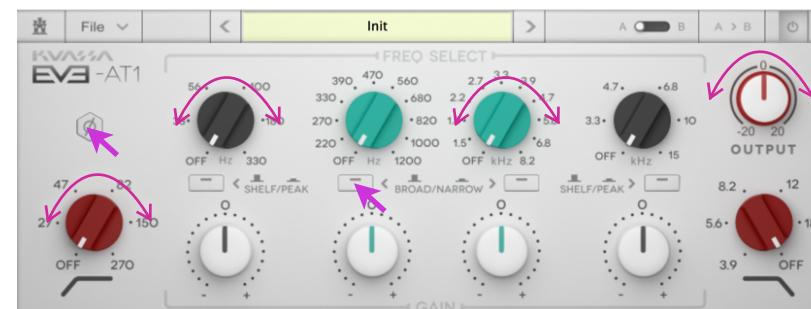

**Note for Mac OSX users:*

Due to sandboxed nature of newer Mac Apps. For you who are upgrading from the previous version of the plugin may or may not need to:

- *move your saved presets into the new folder: Users/[YourName]/Music/Audio Music Apps/Kuassa/Presets/PluginName*
- *from the old Kuassa folder here: Users/[YourName]/Documents/Kuassa*
- *We make sure that these will be handled automatically, but due to unique nature of each computer, there's a small chance that you need to move the presets, and/or re-authorize. E-mail support@kuassa.com if you need a backup of your license*

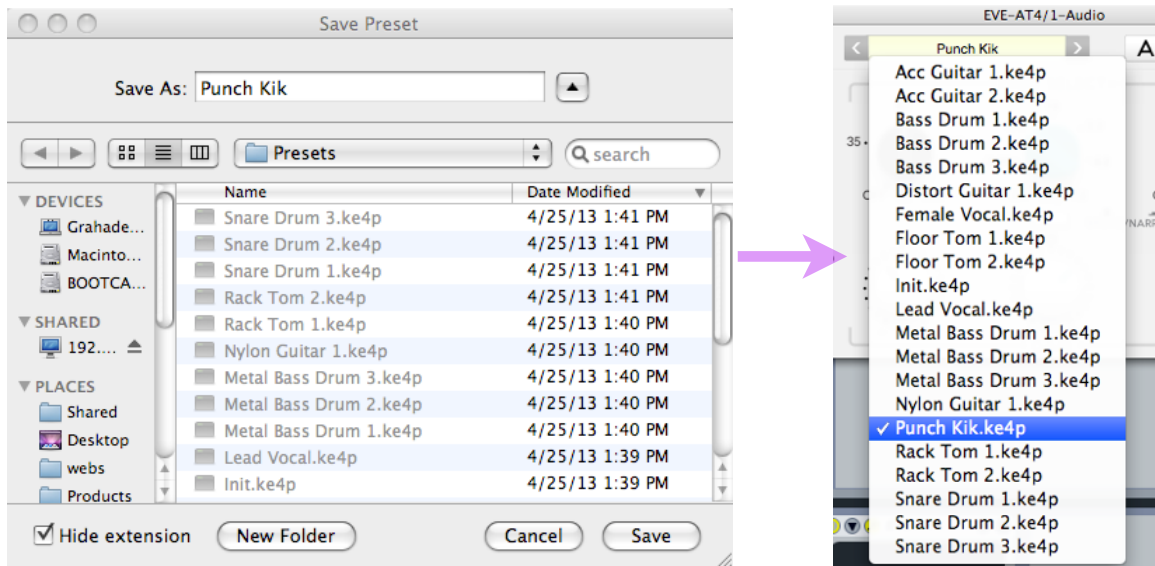

2. To save a preset, set your plugin to the desired parameter settings, then select:

- “Save Preset”: Overwrites currently active preset.
- “Save Preset As”: Saves current settings into a new preset file (.ke1p for **AT1** and .ke4p for **AT4**).

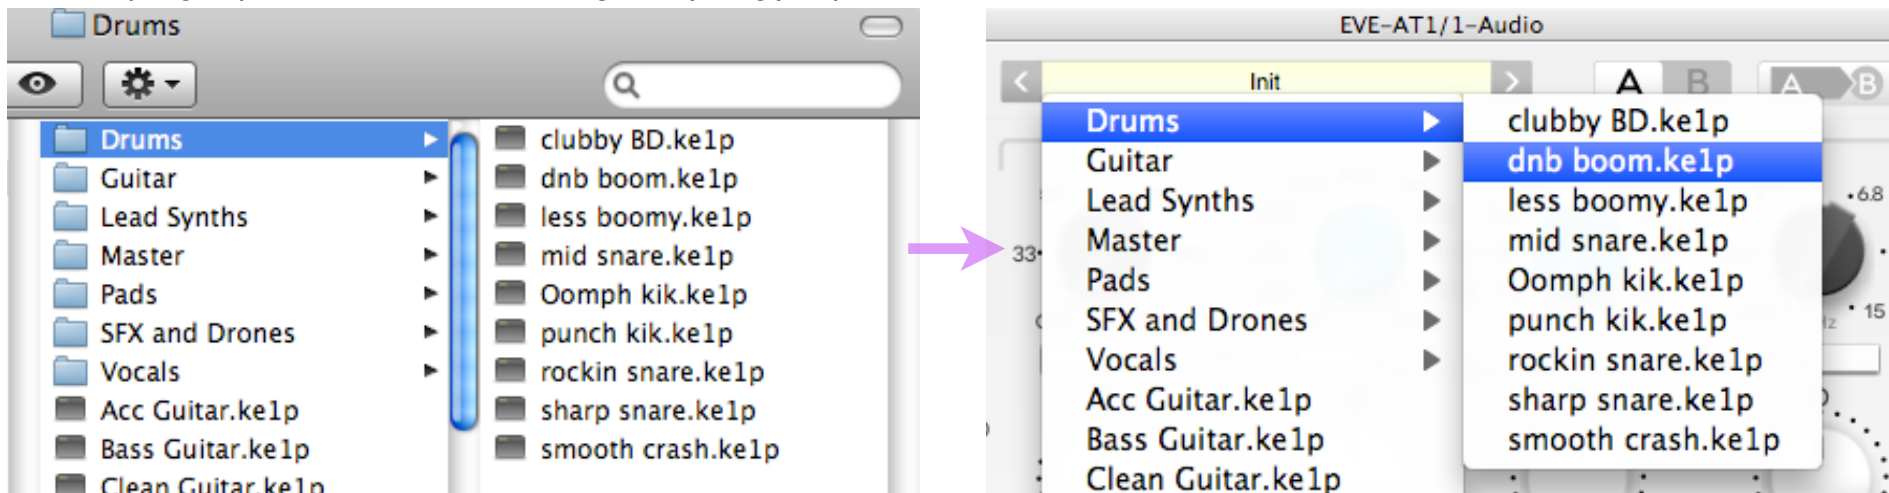

◆ PRESET MANAGEMENT (2/2) ◆

3. If you creating a new preset using “Save Preset As”, make sure that you have chosen the correct preset folder as aforementioned on point 1 above to make sure that it will be recognized automatically by EVE-AT plugins

4. To add new additional preset banks, simply copy the whole folder as a sub-folder. Sub-folders are also recognized to manage presets into groups, useful to manage additional preset bank, or grouping presets based by their use.
